

# AI Stock Briefing

I'm a student who invests on the side and got tired of manually checking news every morning for all my positions. So I built this.

Every weekday at 10 AM, I automatically get an email with a summary of what's happening with my stocks — written by Claude AI, delivered to my inbox before I even open my laptop.

## What it does

- Pulls the latest financial news via NewsAPI
- Sends it to Claude (Anthropic) which analyzes sentiment and writes a structured briefing
- Emails me a formatted HTML report with categories, sentiment indicators and 3 stock picks for the day

## My Portfolio (what gets tracked)

| Category                                                                                                 | Stocks                                               |
|----------------------------------------------------------------------------------------------------------|------------------------------------------------------|
|  AI & Tech               | Nebius, Nvidia, Credo Technologies, Cerebras Systems |
|  Big Tech              | Apple, Meta, Amazon                                  |
|  Health & Commodities  | Novo Nordisk, Silver (XAG)                           |
|  EV & Emerging Markets | Xiaomi, BYD                                          |
|  Consumer              | Monster Beverage                                     |

## Stack

- **n8n** - workflow automation (self-hosted)
- **Anthropic Claude API** - AI analysis
- **NewsAPI** - financial news
- **Gmail API** - email delivery

## What I learned

Setting up the Gmail OAuth through Google Cloud Console was honestly more annoying than building the actual workflow. The n8n + Claude integration itself was surprisingly straightforward once I understood how the AI Agent node works.

The interesting part was prompt engineering — getting Claude to always include every stock even when there's no news about it, and to output clean HTML instead of Markdown.

## Cost

Almost nothing. Claude Haiku API runs about €0.05/month for daily use. Everything else is free tier or self-hosted.
